SATHWIK HS

Bengaluru, India | hs.sathwikhs@gmail.com | +91 9964466062 | GitHub | LinkedIn | TryHackMe | Portfolio

Final-year Computer Science student specializing in cybersecurity, with practical grounding in network security, web application security and secure systems engineering. Certified Network Security Practitioner (CNSP, with Merit) and Certified API Security Analyst (CASA), with a blockchain research internship at PESU ISFCR, an ongoing technical internship at Noventiq India, and competitive CTF experience with F_S0CI3TY across web exploitation, steganography, cryptography, forensics and OSINT.

EDUCATION

PES University - B.Tech, Computer Science and Engineering *Bengaluru | 2023 - 2027*

TLC PU College(A part of CFAL India) - Pre-University (PCMS) *Mangaluru | 2021 - 2023*

EXPERIENCE

Noventiq India - Technical Intern *Bengaluru | Oct 2026 - Present*

- Studying enterprise network security under mentor guidance, covering firewall architecture and policy concepts across Palo Alto, Check Point and Fortinet platforms.
- Building Azure security fundamentals through structured training on the Microsoft security certification path.

PESU ISFCR - Research Intern *Bengaluru | Jun 2025 - Jul 2025*

Project: DecentraCert - Decentralized Credential Platform (Link)

- Built a decentralized application (dApp) that lets issuers generate forgery-proof blockchain certificates via smart contracts.
- Optimized Solidity contracts and implemented batch issuance with Merkle proofs, cutting gas costs by 85%.
- Issued credentials as Soulbound NFTs with public on-chain verification.

PROJECTS

Aethel - Version Control and Provenance for LoRA Adapters (Link) *Aug 2025 - Present*

- Built a version-control system for LoRA adapters that pins each adapter to a base-model revision and verifies SHA-256 content hashes on every push, clone and pull.
- Implemented the Hub's append-only Merkle transparency log with token-protected writes. Anchored log roots as on-chain checkpoints on ETH Sepolia, mirrored adapters to IPFS, independently verified a checkpoint through a second RPC provider.
- Wrote 700+ automated tests and hardened the workspace, storage and provenance checks.

CC_MiniRAFT - Distributed Real-Time Drawing Board with Mini-RAFT Consensus (Link) *Apr 2026*

- Implemented Mini-RAFT consensus (leader election, heartbeat failure detection, majority-commit log replication) across a 3-node Dockerized cluster.
- Added a WebSocket gateway that routes stroke batches to the current leader and a live cluster dashboard, and documented failover from captured cluster logs.
- Built catch-up sync so a restarted node recovers missing log entries from the leader and rejoins without losing shared canvas state.

LEADERSHIP & CTF

Co-Founder, F_S0CI3TY - CTF Team (fs0ci3ty.vercel.app) *Bengaluru | Nov 2025 - Present*

- Competed in 15+ national and international CTFs across web exploitation, cryptography, steganography, forensics and OSINT. Runner-up at the IIT Hyderabad CTF (Jan 2026).
- Built the team site (React, Node) with JWT-authenticated admin, server-verified flag checking and rate limiting.

CERTIFICATIONS - (Link)

Certified Network Security Practitioner (CNSP) - *The SecOps Group*

Certified API Security Analyst - *APIsec University*

SKILLS

Languages & Frameworks: Python, JavaScript, Solidity, MERN stack

Security Tools: Burp Suite, Nmap, Gobuster, Hydra, SQLi tooling

Security Techniques: Network security, API security, web exploitation, smart contract exploitation (CTF)

Languages: English, Hindi, Kannada
